Biomedical Animation: Modelling and Animating DNA

Live stream

Calling all budding biomedical animators! DNA is one of the most iconic structures of the twentieth century and, today, remains equally compelling. It gave humankind the blueprint to life and the quest to unlock the mysteries of process, health and disease have driven science forward ever since. In this hands-on digital workshop, students will gain insight into the process and the steps involved in creating a biomedical animation.

Suitable for

Years 10–12
